

For the future

- Using AWS Transcription instead of CMUSphinx
 - Or finding a better transcription service. Taking accent, slang into account.
- Building a better summarizer of a full text.
 - Finding the theme of the text, analyzing the meaning of the sentences
- Automate sending and receiving voicemails
 - Make voicemail useful again by making them hiding it, disguise it by porting it to another format(Text).
- Optimize performance
 - Faster Transcription, faster Summarizing, Optimizing backend database
- Add features like sorting, searching and organizing voicemails using Machine learning
